

Slack Clone Project

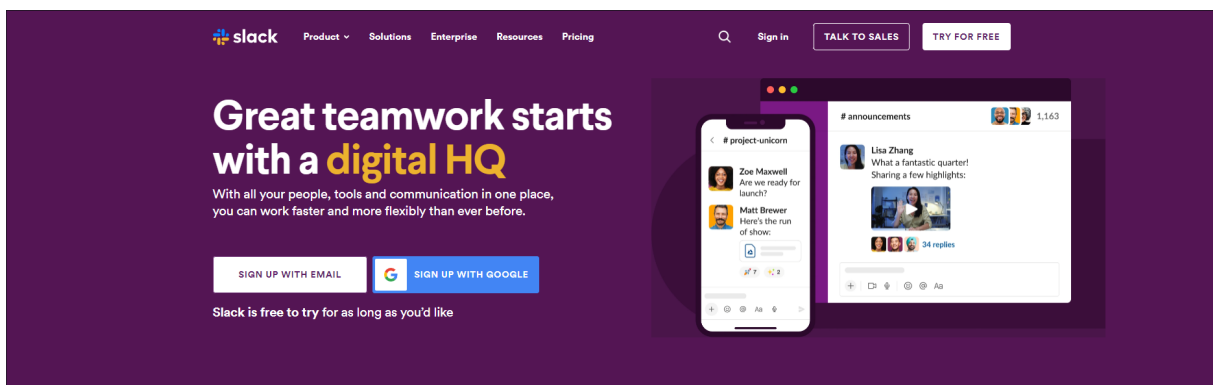

This Project will be the copy of slack.com

You can download the most of the needed content(images, logos, etc..) from this page, if you can't get it from here you can search them on the web, ask your team mates or tutor for a resource.

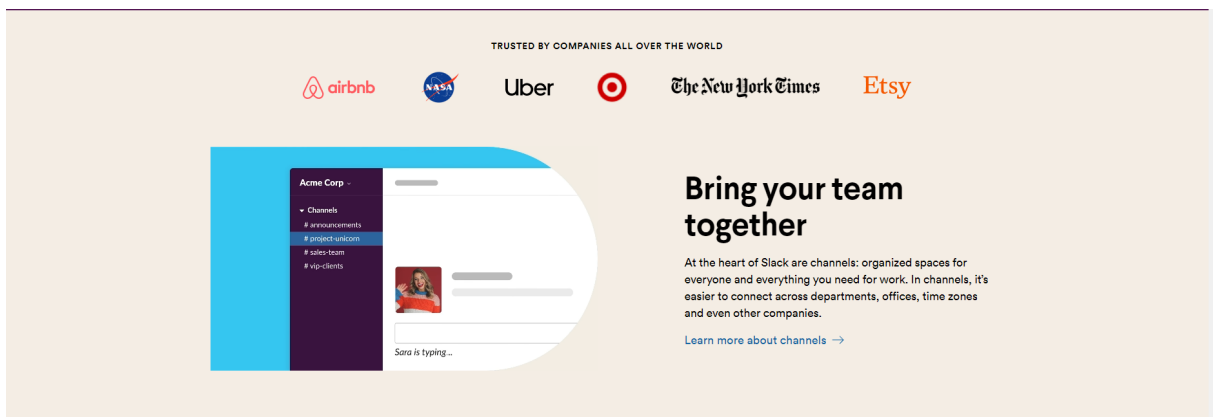

This project just needs to be represent the visual copy of slack.com

You don't need to add any functionalites but it should be responsive like the original web page does for different screen sizes.

Third Part: Esra

Choose how you want to work

In Slack, you've got all the flexibility to work when, where and how it's best for you. You can easily chat, send audio and video clips, or hop on a huddle to talk things out live.

Move faster with your tools in one place

With your other work apps connected to Slack, you can work faster by switching tabs less. And with powerful tools like Workflow Builder, you can automate away routine tasks.

85%

of users say Slack has improved communication*

86%

feel their ability to work remotely has improved*

88%

feel more connected to their teams*

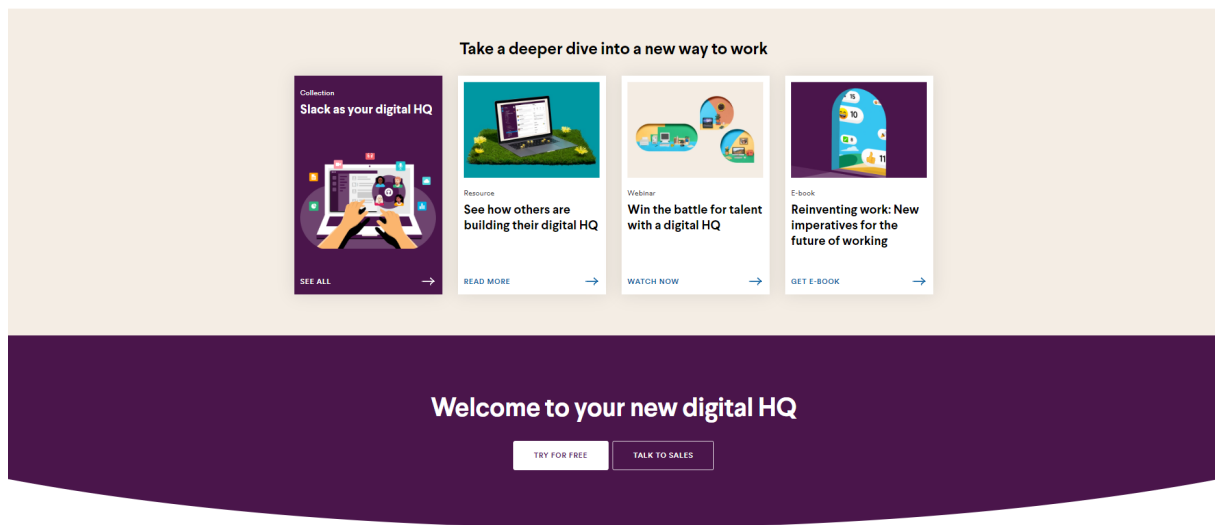

"We were able to create a large virtual network of employees that can communicate as though they are together. There was a lot of disruption in terms of where we worked, but in terms of how we worked—very little disruption."

Mark Smith
Senior Technical Product Manager, T-Mobile
